How to install and remove direct mount rings or spiders on Gen 4 XCX Race and Gen 2 Cranks

Written By: The Hive - Jeremy

## INTRODUCTION

How to install and remove direct mount rings or spiders on Gen 4 XCX Race and Gen 2 Cranks which do not use adjustable chainline spacers like Gen 3 and Gen 4 TRS and LG1 cranks.

### TOOLS:

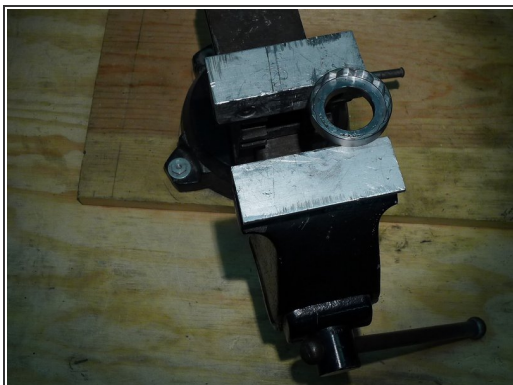

- [e\\*thirteen crank spider tool](#) (1)
- [Vise](#) (1)

### PARTS:

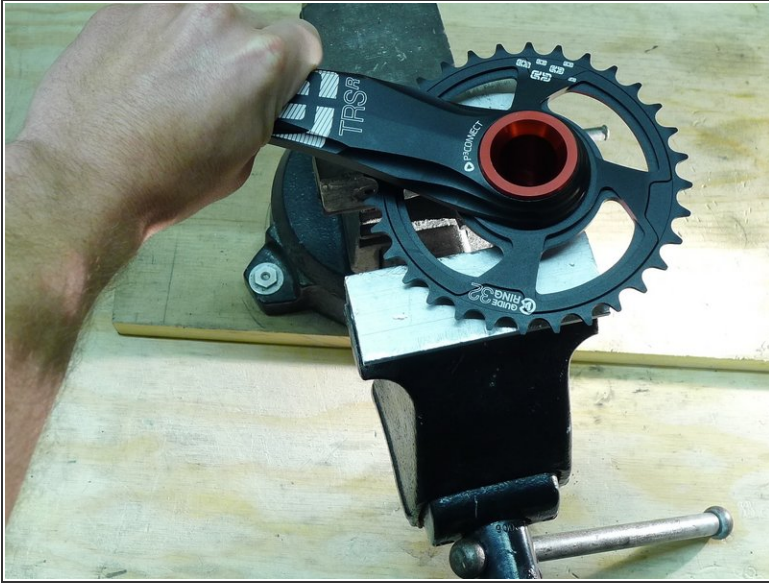

- [grease](#) (1)
- [medium strength threadlocker](#) (1)

## Step 1 — How to install/remove direct mount chainrings on Gen 4 XCX Race and Gen 2 Cranks

- Insert the spider locking tool into a vise
- Be sure the vise will accommodate the spindle
- Insert the spindle and locking into the tool

## Step 2

**⚠ Press down on the driveside arm and spindle assembly to ensure that it does not slip in the tool**

- Turn the crank counter-clockwise (as seen from above) too loosen the lockring
- Be careful not to injury yourself on the sharp chainring teeth
- It can be helpful to bump the arm loose rather than just applying steady pressure

### Step 3

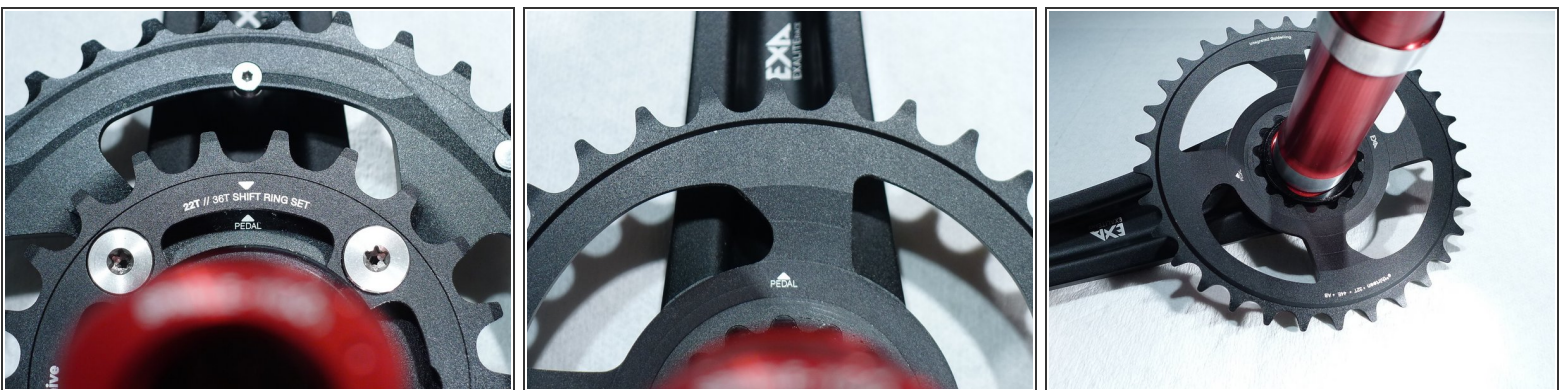

- Once the lockring is loose, unthread it completely
- Remove the spider or integrated ring from the splines
- The spider or ring will fit snugly on the crank arm splines, it can be helpful to rock it in order to free it from the arm
- Do not use a hammer to remove the spider or integrated ring

## Step 4

- Thoroughly clean the splines on both the spider and arm
- Clean the lockring
- Lightly grease the splines on both the spider and the arm

## Step 5

- Install the spider or integrated ring on the arm
- Be sure to clock the spider properly such that the rings will line up in the right place
- Press firmly to seat the splines

## Step 6

- Since you will not be able to use a torque wrench, follow the procedure below to ensure proper torque
- Lightly grease lockring threads
- Install lockring
- Put lockring and crank back into lockring tool in vise
- Turn lockring until it begins to tighten on the spider face
- Turn crank (or lockring) 90 degrees from touching the spider face to reach proper torque spec (approximately 30Nm)
  - Turn crank clockwise (as seen from top) to tighten
